CANDIDATE NAME				
CENTRE NUMBER		CANDIDATE NUMBER		
MATHEMATICS			9709/	52
Paper 5 Mechanics	s 2 (M 2)		February/March 20	17
			1 hour 15 minut	es
Candidates answer	on the Question Paper.			
Additional Materials	: List of Formulae (MF9)			

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name in the spaces at the top of this page.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all the questions.

Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place in the case of angles in degrees, unless a different level of accuracy is specified in the question.

Where a numerical value for the acceleration due to gravity is needed, use 10 m s^{-2} .

The use of an electronic calculator is expected, where appropriate.

You are reminded of the need for clear presentation in your answers.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

The total number of marks for this paper is 50.

The diagram shows a uniform lamina ABCD with $AB=0.75\,\mathrm{m}$, $AD=0.6\,\mathrm{m}$ and $BC=0.9\,\mathrm{m}$. Angle BAD= angle $ABC=90^\circ$.

(i)	Show that the distance of the centre of mass of the lamina from AB is 0.38 m, and find the distance of the centre of mass from BC . [5]

The	e lamina is freely suspended at B and hangs in equilibrium.	
(ii)	Find the angle between BC and the vertical.	[2]

Two particles P and Q have masses 0.4 kg and m kg respectively. P is attached to a fixed point A by a light inextensible string of length 0.5 m which is inclined at an angle of 60° to the vertical. P and Q are joined to each other by a light inextensible vertical string. Q is attached to a fixed point B, which is vertically below A, by a light inextensible string. The string BQ is taut and horizontal. The particles rotate in horizontal circles about an axis through A and B with constant angular speed ω rad s⁻¹ (see diagram). The tension in the string joining P and Q is 1.5 N.

(i)	Find the tension in the string AP and the value of ω .	[4]
