Paper 3 Advanced Theory

May/June 2015

1 hour 30 minutes

Candidates answer on the Question Paper.

No Additional Materials are required.

No calculators allowed.

## **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name in the spaces at the top of this page.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer **all** questions.

No marks will be awarded for using brand names of software packages or hardware.

At the end of the examination, fasten all your work securely together.

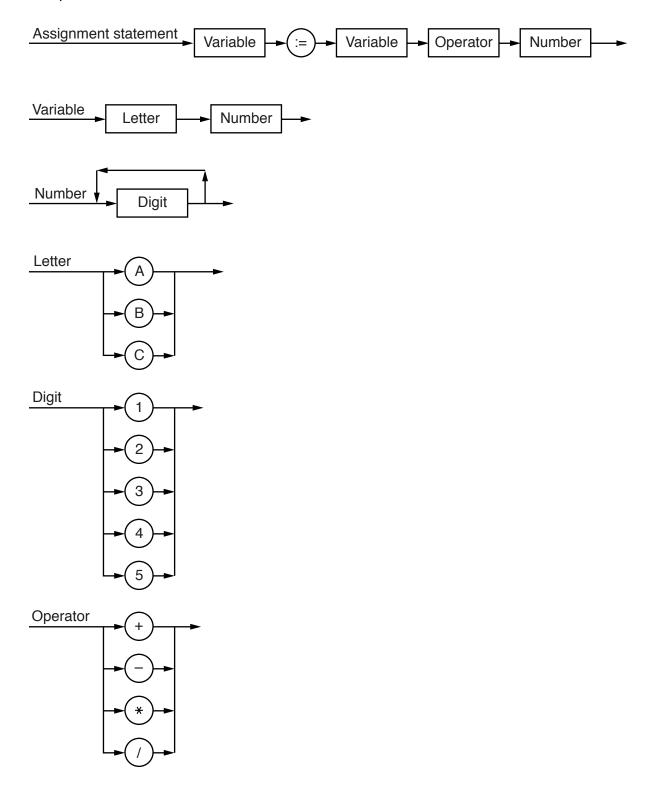

The number of marks is given in brackets [ ] at the end of each question or part question.

The maximum number of marks is 75.

- 1 The following syntax diagrams, for a particular programming language, show the syntax of:
  - an assignment statement
  - a variable
  - a number
  - a letter
  - a digit
  - an operator

| (a) | The  | e following assignment statements are invalid.  |  |  |  |  |  |
|-----|--|---|--|--|--|--|--|
|     | Giv  | e a reason in each case.  |  |  |  |  |  |
|     | (i)  | A2 = B3 + 123   |  |  |  |  |  |
|     | Reason   |   |  |  |  |  |  |
|     |  | [1]   |  |  |  |  |  |
|     | (ii)   | B3 := B3 - 203  |  |  |  |  |  |
|     |  | Reason  |  |  |  |  |  |
|     |  | [1]   |  |  |  |  |  |
|     | (iii)  | A2414 := A3 * B   |  |  |  |  |  |

4 (a) A particular programming language allows the programmer to define their own data types.

An example of a user-defined data type for an address is:

TYPE ThisAddress

|      | DECLARE       | ThisHouseNo       | :    | INTEGER                                     |       |
|------|---------------|-------------------|------|---|-------|
|      |               | ThisStreet        |      |   |       |
|      |               | ThisTown          | :    | STRING                                      |       |
| ENI  | DTYPE         |                   |      |   |       |
| A v  | ariable of th | nis new type is d | ec   | lared as follows:                           |       |
| DEC  | CLARE Hor     | meAddress : '     | ľh:  | isAddress                                   |       |
| (i)  | Write the     | statement that a  | ssi  | igns the house number 34 to HomeAddress.    |       |
|      |               |                   |      |   | [1]   |
|      |               |                   |      |   | [ ' ] |
| (ii) | The type      | definition for Th | İsA  | Address <b>is to be changed</b> .           |       |
|      | Rewrite o     | ne line from the  | de   | finition for each of the following changes. |       |
|      | House nu      | mbers are in the  | ra   | ange from 1 to 10.                          |       |
|      | DECLARE       |                   |      |   |       |
|      | The possi     | ble towns are lir | nite | ed to: Brightown, Arunde and Shoram.        |       |

**(b)** Temperature data from a number of weather stations are to be processed by a program.

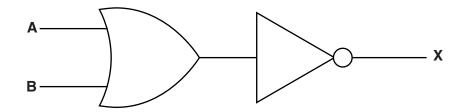

The following data are to be stored:

- weather station ID (a unique four-letter code)
- latitude (to 2 decimal places)
- average temperature (to the nearest whole number) for each year from 2001 to 2015 inclusive

A programmer designs a composite data type WeatherStation. A variable of this type can be used to store all the data for one particular station.

| (i)   | Write the definition for the user-defined data type WeatherStation.                           |  |  |  |  |  |  |
|---|---|--|--|--|--|--|--|
|   |   |  |  |  |  |  |  |
|   |   |  |  |  |  |  |  |
|   |   |  |  |  |  |  |  |
|   |   |  |  |  |  |  |  |
|   |   |  |  |  |  |  |  |
|   | [5]   |  |  |  |  |  |  |
| (ii) The programmer decides to store all the data in a file. The number of weather stored grow to reach 20000, but not all stations will be present at first. |   |  |  |  |  |  |  |
|   | The programmer decides on random organisation for the file.                                   |  |  |  |  |  |  |
|   | Describe <b>three</b> steps which show how a new weather station record is added to the file. |  |  |  |  |  |  |
|   | 1   |  |  |  |  |  |  |
|   |   |  |  |  |  |  |  |
|   | 2   |  |  |  |  |  |  |
|   |   |  |  |  |  |  |  |
|   | 3   |  |  |  |  |  |  |
|   |   |  |  |  |  |  |  |
|   | [3]   |  |  |  |  |  |  |

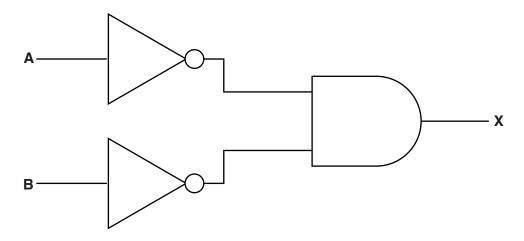

5 (a) (i) Complete the truth table for this logic circuit:

| A | В | Working space | X |
|---|---|---------------|---|
| 0 | 0 |               |   |
| 0 | 1 |               |   |
| 1 | 0 |               |   |
| 1 | 1 |               |   |

[1]

(ii) Complete the truth table for this logic circuit:

| A | В | Working space | X |
|---|---|---------------|---|
| 0 | 0 |               |   |
| 0 | 1 |               |   |
| 1 | 0 |               |   |
| 1 | 1 |               |   |

[1]

| (b) | A s<br>circ | tudent decides to write an equation for $oldsymbol{X}$ to represent the full behaviour of each logic uit. |
|-----|-------------|---|
|     | (i)         | Write the Boolean expression that will complete the required equation for ${\bf X}$ for each circuit:     |
|     |             | Circuit 1: <b>X</b> =   |
|     |             | Circuit 2: <b>X</b> =[2]  |
|     | (ii)        | Write the De Morgan's Law which is shown by your answers to part (a) and part (b)(i).                     |
|     |             | [1]   |
| (c) | Wri         | te the Boolean algebraic expression corresponding to the following logic circuit:                         |
|     |             | B X   |
|     |             | [3]   |
| (d) | Usiı        | ng De Morgan's laws and Boolean algebra, simplify your answer to <b>part (c)</b> .                        |
|     | Sho         | w all your working.   |
|     |             |   |
|     |             |   |
|     |             |   |
|     |             |   |
|     |             |   |
|     |             | [3]   |
|     |             |   |

A company grows vegetables in a number of large greenhouses. For the vegetables to grow well, the temperature, light level and soil moisture need to always be within certain ranges.

The company installs a computerised system to keep these three growing conditions within the best ranges. Sensors are used for collecting data about the temperature, light level, and moisture content of the soil.

| (a) | Nan    | ne the type of system described.   |     |  |  |  |  |  |  |
|-----|--------|--|-----|--|--|--|--|--|--|
|     |        | [1   | ]   |  |  |  |  |  |  |
| (b) |        | e <b>three</b> items of hardware that would be needed for this system. Justify your choice not include sensors in your answer. | ).  |  |  |  |  |  |  |
|     | Item   | .1   |     |  |  |  |  |  |  |
|     | Just   | ification  |     |  |  |  |  |  |  |
|     |        |  |     |  |  |  |  |  |  |
|     | Item   | 12   |     |  |  |  |  |  |  |
|     | Just   | ification  |     |  |  |  |  |  |  |
|     |        |  |     |  |  |  |  |  |  |
|     | Item 3 |  |     |  |  |  |  |  |  |
|     | Just   | ification  |     |  |  |  |  |  |  |
|     |        | [6   | ]   |  |  |  |  |  |  |
| (c) | (i)    | Describe what is meant by feedback in the above system.  |     |  |  |  |  |  |  |
|     |        |  |     |  |  |  |  |  |  |
|     |        |  |     |  |  |  |  |  |  |
|     |        |  |     |  |  |  |  |  |  |
|     |        |  |     |  |  |  |  |  |  |
|     |        |  |     |  |  |  |  |  |  |
|     |        | [3   | 1   |  |  |  |  |  |  |
|     | (ii)   | When the system was designed, various parameters for temperature were set.   | _   |  |  |  |  |  |  |
|     | (")    |  |     |  |  |  |  |  |  |
|     |        | Name <b>one</b> of these parameters.   |     |  |  |  |  |  |  |
|     |        |  |     |  |  |  |  |  |  |
|     |        | [1   | - 1 |  |  |  |  |  |  |

| (iii) | Explain how this parameter value is used by the feedback system. |
|-------|--|
|       |  |
|       |  |
|       |  |
|       |  |
|       |  |
|       | (2)  |

Question 6 continues on page 14.

Each greenhouse has eight sensors (numbered 1–8).

- The byte at address 150 is used to store eight 1-bit flags.
- A flag is set to indicate whether its associated sensor reading is waiting to be processed.
- More than one sensor reading may be waiting to be processed at any particular moment.
- Data received from the sensors is stored in a block of eight consecutive bytes (addresses 201–208).
- The data from sensor 1 is at address 201, the data from sensor 2 is at address 202, and so on.

|     | Sensor number |   |   |   |   |   |   |   |  |
|-----|---------------|---|---|---|---|---|---|---|--|
|     | 1             | 2 | 3 | 4 | 5 | 6 | 7 | 8 |  |
| 150 | 0             | 1 | 0 | 0 | 0 | 1 | 0 | 1 |  |
|     |               |   |   |   |   |   |   |   |  |
| 201 | 0             | 0 | 0 | 0 | 0 | 0 | 0 | 0 |  |
| 202 | 0             | 0 | 0 | 0 | 0 | 1 | 0 | 0 |  |
| 203 | 0             | 0 | 0 | 0 | 0 | 0 | 0 | 0 |  |
| 204 | 0             | 0 | 0 | 1 | 0 | 0 | 0 | 0 |  |
| 205 | 0             | 0 | 0 | 0 | 0 | 0 | 1 | 0 |  |
| 206 | 0             | 0 | 0 | 1 | 0 | 1 | 0 | 0 |  |
| 207 | 0             | 0 | 0 | 1 | 0 | 0 | 1 | 0 |  |
| 208 | 0             | 0 | 0 | 1 | 0 | 0 | 1 | 0 |  |

| (i)  | Interpret the  | e current re | eading for | sensor 2. |        |          |          |         |     |
|------|--|--------------|------------|-----------|--------|----------|----------|---------|-----|
|      |  |              |            |           |        |          |          |         | [2] |
| (ii) | i) The accumulator is loaded with the data from location 150.  |              |            |           |        |          |          |         |     |
|      | Write the assembly language instruction to check whether there is a value waiting to processed for sensor 6. |              |            |           |        |          |          | g to be |     |
|      | LDD 150  |              | /          | // data   | loaded | from add | dress 15 | 50      |     |
|      |  |              |            |           |        |          |          |         | [3] |
